

CONSTRUCTION WITH CUBES

Your assignment this week is to draw as many cubes as possible, and to construct objects out of cubes. On two separate sheets of paper, draw the following:

- 1 . As many cubes as possible. Try them from different perspectives.
- 2 . An object / scene / shape / abstract art constructed completely out of cubes.

Please do these on 14x17 paper.

For part two, see what cubes look like when drawn adjacently. What happens when one partially obscures the other? When you've practiced enough cubes, try to wean yourself from the perspective lines.

For part one, try drawing cubes in one-point, two-point, and three-point perspective. Rotating cubes is also an excellent exercise to try.

Just for fun, take a look at this amazing cube rotation exercise:
