

ALPHABETS EMBEDDED

Your task this week is to compose your initials (or any three letters of the alphabet) into the shape of a cube such that they are all embedded within one another.

1. Think about how each single letter fits on a square, and how that gets translated to fit on the face of a cube.
2. In which direction do the depth lines of each letter go? (Hint: vanishing point.)
3. How can we create depth with shadows?
